(1 Point) (2 Points) (3 Points)

You weigh less than the amount in the left column (0 points)

The higher your score, the higher your risk.

If you scored 5 or more: You are at increased risk for having type 2 diabetes. Talk to your doctor about simple blood tests to check for diabetes or prediabetes. Early diagnosis and treatment can prevent or delay heart attack, stroke, blindness, kidney disease, and other health problems.

If you scored below 5: Even if your score was below 5, you may be at increased risk for having prediabetes—blood sugar levels that are higher than normal but not high enough to be called diabetes. The good news for people with prediabetes is that you can lower your risk for type 2 diabetes. Talk to your health care team about getting tested, particularly if you are over 35, have overweight or obesity, or have a family member with diabetes. Find out about the small steps you can take to prevent or delay type 2 diabetes and live a long and healthy life.

You are more likely to develop type 2 diabetes if you are African American, American Indian, Asian American, Hispanic/Latino, or Pacific Islander. The National Institute of Diabetes and Digestive and Kidney Diseases (NIDDK) offers health information in English and Spanish.
