

Meg Hager, M.S., M.P.H., CGC, is the Vice-chair of the National Society of Genetic Counselors Renal Special Interest Group and a laboratory genetic counselor at Natera, Inc., specializing in kidney genetics. She trained at the University of Pittsburgh, where she earned dual master's degrees in both genetic counseling and public health genetics. Her research interests involve the phenotypic spectrum of COL4A1-related disorders, as well as "Patient Satisfaction for Hereditary Kidney Disease Genetic Counseling" by telephone. She recently co-authored manuscripts on Genetic Counseling in Kidney Disease, variant interpretation for *COL4A4*, and Genomics Integration into Nephrology Practice. She has experience navigating the return of results through previous involvement with the Interrogating Cancer Etiology using Proactive Genetic Testing (INTERCEPT) study.
